

OFFICIAL FRAMEWORK GUIDE

CHECK + M.O.D.E.L.S.

A Practical Framework for Selecting AI Systems and Verifying Their Outputs

Prepared at SIN School of AI, Gayatri Innovation Center
AI Agent Xcelerator Program | Winter Batch 2026
Institutional framework edition — intentionally unsigned

TWO CONTROLS, ONE RESPONSIBLE WORKFLOW

Purpose & Use

M.O.D.E.L.S. is used before or during tool selection. CHECK is used after an output is produced and before it is trusted or acted upon. Together they create a simple governance loop for classrooms, institutions and professional teams.

When	Framework	Question
Before use	M.O.D.E.L.S.	Is this the right system for this task, budget, data and risk level?
After generation	CHECK	Is this output supported, internally consistent and safe to use?
Before decision	Human sign-off	Who is accountable, what uncertainty remains, and what must be disclosed?

This guide is intentionally unsigned and contains no seal. It is a reusable learning and evaluation instrument, not a signed certification.

CHOOSE BEFORE YOU USE

M.O.D.E.L.S. — Selection Framework

M	Modality	Text, image, audio, video, files?
O	Output quality	Correct, clear, complete?
D	Dollars	Cost per 1M tokens or plan price?
E	Efficiency	How fast? How much re-prompting?
L	Limits	Context window, file size, daily caps?
S	Safety & privacy	Where does my data go? Can I trust it with this?

Supplied framework graphic.

Code	Dimension	Review question	Suggested scale
M	Modality	Required inputs and outputs supported?	0 = unsuitable; 5 = complete fit
O	Output quality	Correct, clear, complete and audience-ready?	0 = unusable; 5 = consistently strong
D	Dollars	Total cost, plan, tokens, credits and rework?	0 = poor value; 5 = strong value
E	Efficiency	Speed, steps and re-prompting to usable output?	0 = inefficient; 5 = efficient
L	Limits	Context, files, caps, tools and freshness acceptable?	0 = blocking; 5 = non-blocking
S	Safety & privacy	Data handling and controls appropriate for risk?	0 = unacceptable; 5 = appropriate

A numeric score is useful only when the evidence for each cell is retained. If a criterion cannot be tested, record N/A—do not invent a score.

EVIDENCE REQUIRED

M.O.D.E.L.S. Evaluation Worksheet

M.O.D.E.L.S.	ChatGPT	Claude	Qwen	CChat
M Modality				
O Output quality				
D Dollars				
E Efficiency				
L Limits				
S Safety & privacy				
TOTAL / 30				

Supplied blank comparison matrix. It remains blank because no completed evidence-backed score sheet was provided.

Criterion	Score 0–5 / N/A	Evidence or test result
M — Modality		
O — Output quality		
D — Dollars		
E — Efficiency		
L — Limits		
S — Safety & privacy		
TOTAL / 30		

VERIFY BEFORE YOU TRUST

CHECK — Verification Framework

C	Cite	Ask for sources, then open them yourself
H	Hunt hallucinations	Names, dates, quotes and links that look too perfect
E	Examine numbers	Recalculate every figure
C	Cross-check	Ask a second model or use a trusted website
K	Keep a human in charge	You decide; disclose AI help

Supplied framework graphic.

Step	Action	Required evidence
C — Cite	List each factual claim and open the original source.	Source URL/file, publisher, date, page/section
H — Hunt	Check names, dates, quotes, links and overconfident wording.	Marked-up output and correction log
E — Examine	Recalculate numbers and verify units/time periods.	Independent calculation or source table
C — Cross-check	Compare with a primary source or independent trusted reference.	Cross-check result and discrepancies
K — Keep human in charge	Record decision, reviewer, uncertainty and AI disclosure.	Named approver and final disposition

COPY-READY INSTITUTIONAL TEMPLATE

Combined Decision Record

Task / decision	
Owner and reviewer	
Required as-of date	
Systems compared	
Inputs and source files	
M.O.D.E.L.S. result	
CHECK issues found	
Corrections made	
Residual uncertainty	
Final decision / disposition	
AI assistance disclosure	

Framework authorship

Developed through applied research conducted by Er Harshvardhan Purohit with Vanshika Verma, Priyanshu Tanwar, Shefali Agarwal, Kanika Gehlot and Bhanu Pratap Sharma during the AI Agent Xcelerator Program, Winter Batch 2026.
